Mastercard Track™ Decision Engine

Optimize account payables by analyzing Buyer and Supplier payment and acceptance preferences

View resources

Benefits

Mastercard Track™ Decision Engine is a Mastercard Track™ service that enables Buyer Payment Agents to optimize accounts payable for their Buyers by recommending the best method and timing of payment for a given invoice.

Grow acceptance

Initiate payments with the right method and on the optimized date for higher success in payment acceptance

Optimize cash flow

Reduce transaction costs and maximize days payable outstanding (DPO) for better cash flow management

Increase revenue

Maximize card spend and provide increased capture of early payment discounts

How it works

Mastercard Track™ Decision Engine analyzes invoice details, Buyer optimization goals, and Supplier payment preferences to recommend the best method and timing of payment for a given invoice.

Buyer Payment Agents can optimize their Buyer's working capital position by following the steps below:

1. Buyer sends approved invoices and preferences to Buyer Payment Agent

2. Buyer Payment Agent submits invoices to Mastercard Track™ Decision Engine

3. Mastercard Track™ Decision Engine evaluates invoices and provides recommendation to Buyer Payment Agent

4. Buyer Payment Agent approves recommendation and Supplier executes payment with their existing payment processor

Use cases

Buyer Payment Agents can boost customer acquisition and retention by offering Mastercard Track™ Decision Engine.

Reduce late payment penalties

Maximize capture of early payment discounts while preventing late payment penalties

Optimize working capital

Adjust working capital goals in real time and leverage different algorithms for more flexibility

Route approved payment recommendations

Execute buyer-approved payment recommendations by integrating with Mastercard Track™ Business Payment Service

Why use it

Companies are looking to adopt business-to-business (B2B) innovations to address accounts payable inefficiencies:

$1.4 trillion

total global cash opportunity that companies could realize through better working capital management

PricewaterhouseCoopers, "Creating value through working capital" 2020

72%

of companies experience damage because of inefficient invoice and payment processing

Edgar Dunn & Company, Mastercard commissioned survey, 2021

53%

of companies said optimizing working capital is a priority

Edgar Dunn & Company, Mastercard commissioned survey, 2021

Mastercard Track™ Decision Engine

Copy to Markdown

Overview

Mastercard Track™ Decision Engine helps Buyer Payment Agents **free up working capital** and maximize payment acceptance for Buyers. The solution is an intelligence tool that automatically analyzes invoices against Buyers' working capital goals and Suppliers' payment preferences, and recommends the best time and method of payment.

For Buyers, the solution can help maximize incentives while preventing late payment penalties. Buyer Payment Agents, meanwhile, stand to gain revenue from transaction volume and can boost customer acquisition by leveraging insights from Mastercard Track™ Decision Engine payment recommendations.

> **NOTE:** Mastercard Track™ Decision Engine is a standalone service that does not require onboarding Buyer Payment Agents to **Mastercard Track Business Payment Service**.

For more details about Mastercard Track™ Decision Engine, see our **product page**.

How it works

When a Buyer Payment Agent submits a payment recommendation request with approved invoices, Supplier payment preferences, and Buyer working capital optimization goals to Mastercard Track™ Decision Engine, Decision Engine analyzes the request and generates a payment recommendation that details how to group the invoices, when to pay the invoices, and what payment method to use.

1. The Buyer Payment Agent obtains approved invoices and working capital optimization goals from their Buyers.
2. The Buyer Payment Agent submits a payment recommendation request to Mastercard Track™ Decision Engine.
3. Mastercard Track™ Decision Engine analyzes the approved invoices, Supplier payment preferences, and Buyer working capital goals provided in the request, and then generates and sends the payment recommendation to the Buyer Payment Agent.
4. The Buyer Payment Agent shares the payment recommendation with their Buyer who can execute a payment to the Supplier.

Before you start

To get started, sign up for an account on Mastercard Developers. Then, log in and create a new project using the Mastercard Track™ Decision Engine API. This will equip you with the necessary credentials to call our Sandbox environment and start implementing.

Follow **this tutorial** to see an example of how to create a project on Mastercard Developers.

Good to know

After you have tested your implementation, you can ask your **Mastercard representative** for access to the production environment.

Production keys are generated instantaneously and subject to annual renewal, but they still need to be approved for production environment access before you can go live. Once your production access request has been reviewed, you will receive a notification confirming your access has been approved or denied. When you move to the production environment, transactions will be billed. Contact your **Mastercard representative** to learn more about pricing.

> **NOTE:** Currently, the maximum number of invoices that can be submitted to Decision Engine at a time (as a single request) is 100 invoices.

Next steps

Now that you are familiar with Mastercard Track™ Decision Engine, it's time to write some code. To help you get started:

- Read the **API basics** section to learn about the available integration options.
- Familiarize yourself with the **use case** supported by Mastercard Track™ Decision Engine.
- Test our API using the **OpenAPI Explorer**.
